

Disciplined Equities

Market Update

Overview

U.S. equities recovered sharply after the fourth quarter’s selloff, with the S&P 500® delivering its best start to the year since 1998 and best quarter overall since 2009. Drivers of the first quarter’s reversal included renewed optimism regarding a U.S.-China trade deal and a dovish Federal Reserve.

Low-quality, risk rally

Consistent in a high-returning market environment, higher-risk companies with lower financial quality were some of the best performers. Pro-risk sentiment was largely evident at the sector level, where technology and industrials led on an improved outlook for China and trade, while energy and consumer discretionary were not far behind, in part due to the recovery in oil prices and improving U.S. consumer confidence.

Momentum correction

The quarter’s market reversal triggered a momentum correction, as market leadership transitioned from the fourth-quarter’s flight to quality. Market breadth, a metric that measures the degree of concentration in market leadership, has historically been a reliable predictor for momentum corrections. In particular, some of the most challenging environments for price momentum have occurred in narrow markets. After the first quarter’s momentum correction, market breadth in the Russell 1000 and Russell 2000 universes has broadened, suggesting that the momentum correction has stabilized.

Underperformance of value

A consistent theme from last year was the continued underperformance of attractively valued securities in the market. More expensive growth companies quickly recovered from their December low, resulting in the underperformance of value.

Insights from Market Monitor

Value investing has had its fair share of challenges in recent years. 2018 was no exception, as the most expensive ten-percent of companies within the Russell 1000® and Russell 2000® universes outpaced the cap-weighted benchmark return by 16.1% and 11.6%, respectively (chart 1 and 2). However, as we look ahead, the relative attractiveness of valuation factors has greatly improved. Following such extreme levels of outperformance by the most expensive stocks in the market, a dislocation has developed, which has historically been a reliable predictor for the forward returns to valuations.

Valuation spreads, which measure the degree of separation between cheap and expensive stocks in the market, have widened in the Russell 1000 and Russell 2000 universes to a 0.9 and 1.2 standard deviation dislocation, respectively (chart 3). Historically, wide valuation spreads have been a positive indicator for the forward returns to valuation factors. In fact, some of the most notable value rallies have occurred in market environments where valuation spreads have exceeded a reading of 1.0 standard deviation wide (charts 4 and 5).

While valuation factors have had a difficult stretch of performance, 2018’s dominance by the most expensive stocks in the market has created a dislocation in valuation spreads, which has historically been a prelude to outperformance valuation. We continue to stay true to our time-tested beliefs by emphasizing company valuations as a part of our multi-dimensional stock selection process.

Foreign investing involves special risks due to factors such as increased volatility, currency fluctuation and political uncertainties.

Past performance is not necessarily a guide to future performance.

The S&P 500® Index is a capitalization-weighted index of 500 large-cap U.S. stocks.

The Russell 1000® Index is an index of approximately 1,000 of the largest companies in the U.S. equity market.

The Russell 2000® Index measures the performance of the small-cap segment of the U.S. equity universe.

Investments cannot be made in an index.

Beta is a measure of a portfolio’s volatility. Statistically, beta is the covariance of the portfolio in relation to the market. A beta of 1.00 implies perfect historical correlation of movement with the market. A higher beta manager will rise and fall more rapidly than the market, whereas a lower beta manager will rise and fall slower.

BMO Global Asset Management is the brand name for various affiliated entities of BMO Financial Group that provide investment management and trust and custody services. Certain of the products and services offered under the brand name BMO Global Asset Management are designed specifically for various categories of investors in a number of different countries and regions and may not be available to all investors. Products and services are only offered to such investors in those countries and regions in accordance with applicable laws and regulations.
